

# STRANDED GALVANISED WIRE BOBBINS

## SPECIFICATION SHEET

Stranded wire is traditionally the electric wire of choice due to its malleability, flexibility and galvanised longer life finish. It is stronger and longer lasting than poly wire, with better conductivity. Supplied on a handy plastic reel for ease of unwinding / rewinding.

However, if it's a permanent electric fence line you need, we recommend using the longer lasting 2.0mm high tensile line wire (F2104). If it's visibility you require with flexibility to move and rewind, then we would recommend using electric rope or electric tapes, especially if using with horses.

### FEATURES

- Single Wire Diameter - 1.60-1.65mm
- Tensile strength - 125kgs/mm<sup>2</sup>
- Resistance - 0.12 Ohms/m

Available in 200  
and 400m reels
