

TURBOSTAR EQUIFENCE

SPECIFICATION SHEET

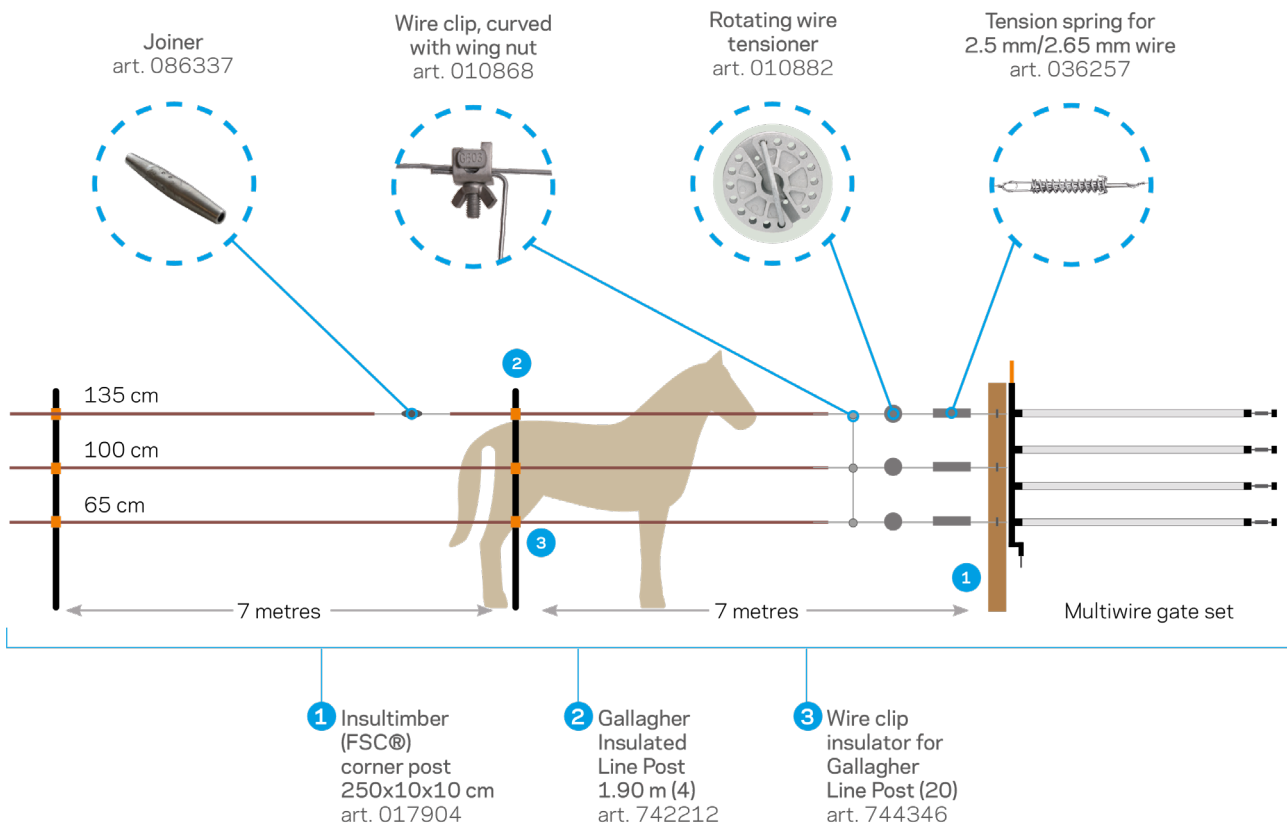

Equiwire is the best conductor for professional and safe equine fencing. It consists of a metal core with a special UV-resistant coating on the outside. This coating makes the wire enormously strong, but soft when a horse comes into contact with it accidentally. TurboStar Equiwire contains 33% more conductive material than the current Equiwire. Besides paying attention to safety, the product has been developed to last much longer.

Features

- 250m roll
- Available in terra and white
- Highly visible because of 7.5 mm diameter
- No oxidation because of plastic/carbon covering
- Optimal conductive plastic cable with a 2.7 mm galvanised wire core
- The safest and most durable wire for horses with a 10 year guarantee

Specifications

- Inner wire, 1x 2,7mm HTHC conducting wire
- Outer conductor, 4x high conducting carbon conductors
- 2x 0,16mm Stainless steel wire
- 7,8 mm thick Terra or White shield
- Lower resistance 0,0115 Ohms / meter compared to the standard version 0,035
- Breaking strength 400Kg.
- 10 Years UV warranty The Gallagher TurboStar EquiFence benefits
- 33% more conductive surface thanks to 4 instead of 3 carbon lines
- Low resistance core of 2.7 mm aluminium-coated wire with extra low resistance,
- Lower breaking strength makes less chance of injuries.
- Reduced risk of animal injuries by combining the fence wire joiner with the new EquiFence.
