

# PLASTIC LAND DRAINAGE SPECIFICATION SHEET

Plastic land drainage pipe is a modern replacement for clay pipes and has been universally and effectively used for over thirty years.

Perforated and non-perforated options, in a range of pipe diameters, 60-160mm.

## Perforated land drainage

- Principally used to alleviate water logged fields, lawns and gardens.
- The plastic drain is laid in a permeable stone enclosure allowing the water to filter through to the plastic pipe which then directs the water to the designated outlet.

## Non-perforated land drainage

- Commonly used under gateways or when filling in a ditch.

*\* Please note – Various sizes available, dependent on the severity of the problem. Membrane can be added to the pipe particularly for fine soil types to prevent pipe blockage. Perforated pipe 60mm x 150m Also used in the construction of riding arenas.*

## Benefits

- Strong and flexible
- Fast installation
- Provides excellent water flow
- Kitemarked to BS 4962:1989, License No. KM557607
- Manufactured from high quality rHDPE
- Tightly wound coils that enables easy stacking and handling
