

CLIPLEX EXTENSIONS

SPECIFICATION SHEET

Vertical Extensions

Any Clipex post can be extended above or below ground by simply using the unique Beefy and standard extension bracket.

These extension brackets simple slide down the web of the clipex posts and the bolts tightened to hold in place. If you need to extend the height of your fence in certain areas, these can be retro fitted to existing clipex posts, the vertical extension has 3 spring loaded clips that allow for barbed, plain wire or electric wire if using Clipex insulators.

It's always handy to have some extension brackets if you are fencing along various terrains. If you come across softer ground the extension bracket can be fitted to the foot of the post and the 51cm extension bracket can be added to extend the post length, alternatively if the ground is exceptionally soft you can fit a whole post length into the bracket.

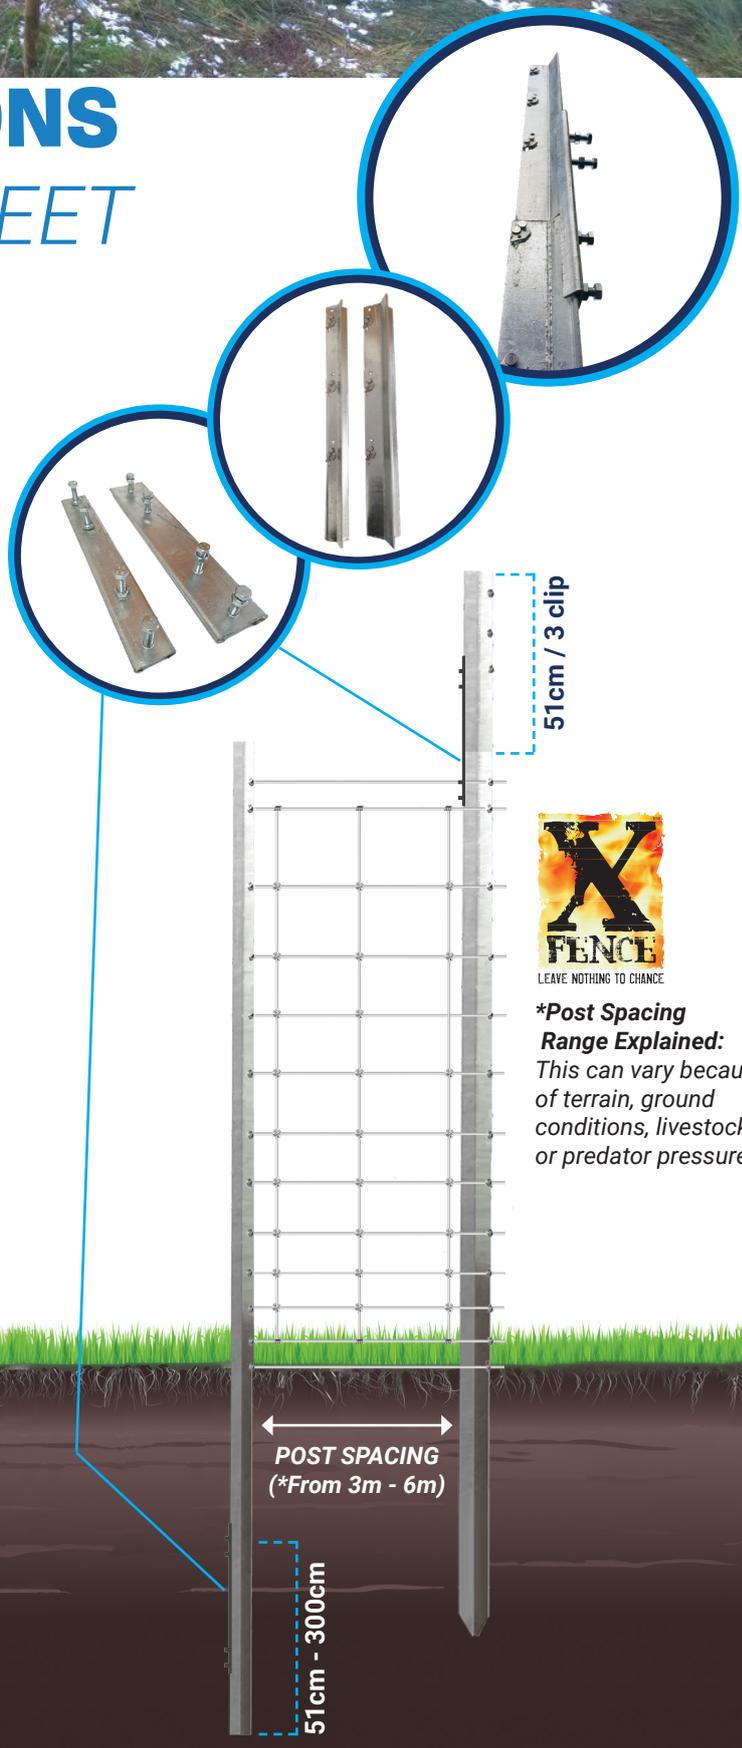

Standard extension 51cm / 3 clip - CL2766
Beefy extension 51cm / 3 clip - CL2767

Standard 4 bolt extension bracket - CL2768
Beefy 4 bolt extension bracket - CL2769

Cranked Extensions

We have designed various cranked arm options to take apron fold netting, electric lines or barbed wire. Corner and end cranks available.
